what do you think? A: I'm afraid that you cannot migrate an entire project from one version to another. If you have "custom scripts" (.Script files) and other custom lumion files in your project, I would imagine that these would not be migrated. If you have custom components, then not all of these may be migrated. If you have scripts and other custom files that are already in Lumion 3 Ultimate, then you should have no problem with that. Lumion 3 Ultimate is a newer, more updated version of Lumion 2. There are plenty of updates and features that are new in Lumion 3 Ultimate, but a lot of the code and structures that are in Lumion 2 Ultimate are also in Lumion 3 Ultimate. If you have a job on hand that you'd like to complete, I would suggest: Saving your entire project (not just the part you'd like to complete) in Lumion 3 Ultimate. Start the new project in Lumion 3 Ultimate. Using a shortcut (eg. going to "Save As" and replacing the version string with "Lumion 3 Ultimate") save the Lumion 2 project to your desktop. Start the project again, and close the project that was saved in Lumion 2 Ultimate. Delete the Lumion 2 project from your computer. Re-import the Lumion 2 project into Lumion 3 Ultimate. Edit the Lumion 2 project in Lumion 3 Ultimate, and complete the rest of the job. I hope this helps. Pilot study: feasibility and acceptability of a standardised self-management programme for heart failure patients. To assess the feasibility and acceptability of a Heart Failure self-management intervention for patients with heart failure, and to identify appropriate outcome measures. This is a pilot randomised controlled trial in the waiting room of a hospital outpatient clinic. Patients are randomised to receive a 20-minute nurse-led intervention or to a wait-list. Feasibility of recruitment, consent and data collection are assessed. Acceptability of the intervention is explored using an adapted version of the Behavioural Change Readiness Scale and End-of-Session Evaluation Form, and a questionnaire on training. A total of 132 patients are recruited, of whom 92 are randomised, 32 to the intervention and 60 to the wait-list. Intervention delivery is optimal for this pilot study. Recruitment rates are good, and the intervention is acceptable to 82157476af
